

Great Careers Without A Degree

by: **Max Stein**

{mosimage}One of the great myths associated with the workforce is that you need to have a four-year college degree to be successful. As the economy has shifted to the information age, with a greater reliance on technology and services, this belief applies less and less.

The new economy relies on technology more than any time in the past. In fact 70% of existing jobs require specific technical knowledge and this technology is being applied in newly created industries like biometrics, security, nanotechnology and reusable energy.

Eighty percent of existing jobs don't require a four-year degree, while only 25% of students who begin college actually graduate. Of those who do graduate, 30% don't get a job that actually requires a degree!

The solution to these issues for many graduating high school seniors and workers unsatisfied with their current careers rests in a specialty technical school. These schools provide specific technical training in a variety of career fields. Career training courses take less than four years to complete, most take less than two. These schools offer online and night courses, so you can have a job or a family and the best part is graduates earn 50% more than high school graduates.

Here is a list of ten great careers that offer high employment prospects and competitive pay.

- Nursing
- Medical Assistant
- Dental Hygienist
- Help Desk Analyst
- Graphic Design
- Multimedia Design
- Medical Coding/Billing
- Medical Office Administration
- Paralegal
- HVAC Technician
